

General Instructions

Proper Fit: Ensure the shoes fit comfortably and securely before wearing them. Incorrect sizing may cause discomfort or injury. **Breaking In:** Allow time to break in your new shoes to avoid discomfort or blisters. **Usage Environment:** These shoes are designed for casual/urban and general outdoor wear. Avoid using them for extreme outdoor activities or on hazardous terrains unless specified. Our shoes are not designed to be safety shoes, so they will not protect against the impact of heavy or sharp objects. Take specific care when wearing shoes in other conditions than normal urban/outdoor conditions

Specific Safety Warnings

The soles are designed for urban/general outdoor environments. Exercise caution on wet or slippery surfaces, as traction may be reduced. Take special care in winter; exercise caution on icy or slippery surfaces as no sole is entirely slip-proof. Avoid exposing your shoes to extreme temperatures, which can affect performance and safety and can degrade the materials. Ensure that shoes when used in winter conditions are thoroughly cleaned after exposure to salt or chemicals to prevent material degradation.

Regularly inspect the shoes for signs of wear or damage. Discontinue use if the sole or upper shows significant wear that may compromise safety. For open style shoes/sandals: Ensure they are securely fitted to prevent accidental slipping during movement. In open style shoes/sandals your feet are exposed to the environment, specifically but not limited to potential contact with sharp objects or abrasive surfaces, hazardous materials and sunlight which can result in serious injuries/sunburn.

Using your shoes in more challenging outdoor terrain such as forests, mountains or wetlands comes with specific dangers. You are always responsible for your own safety when you decide to enter these more challenging environments.

Choking Hazards

All small components, such as buttons, lace-holders or decorative elements, are securely attached to prevent detachment and choking risks. However, small parts may still come loose, so when this happens make sure that small parts are kept outside the reach of children to avoid them swallowing them.
